Inception Date: 22 August 2023

Investment Objective

The Fund will invest in a mixture of asset classes to form a multi-asset portfolio with the aim to earn Investors a return of CPI +3% p.a. after management fees (before performance fees) and before tax, over rolling 7-year periods.

Strategy Overview

The Fund will use a combination of strategic asset allocation taking into account long term projections on asset class performance, short term dynamic asset allocation tilts, and passive and active investment management to provide returns and mitigate risk in the medium term.

Market Update

Australian equities began the year on a strong footing, with the S&P/ASX 200 rising 2% in January. Sector returns were mixed, with Energy and Materials the standout performers, rising 11% and 9% respectively, supported by stronger oil and copper prices.

In contrast, Information Technology extended its weakness into 2026, falling 9%.

Most factor indices recorded gains, led by Momentum and Value, each up 3%, while Low Volatility edged down 1%.

The CSI300 finished marginally in the red for the month down - 0.2%, as strength in policy-supported technology and industrial names was offset by ongoing weakness in property-related sectors and subdued consumer sentiment.

The S&P 500 recovered to reach record highs, ending January up 1%.

Market gains broadened beyond mega-caps, with mid- and small-cap indices advancing 4% and 6%, signalling a wider participation in the rally.

Sector leadership rotated toward cyclicals, with Energy and Materials rising 14% and 9%, while factor performance favoured dividend and value strategies over momentum.

In Europe, Information Technology led gains in January, rising 11% driven by strong semiconductor stocks such as Besi and ASM International. Utilities climbed nearly 8%, while Consumer Discretionary lagged, falling 8%.

In January 2026, the Reserve Bank of Australia lifted the official cash rate by 25 basis points to 3.85 per cent in response to persistent inflationary pressures, marking the first rate increase in over two years.

US inflation remained elevated, leading markets to price a more hawkish Federal Reserve outlook, supporting the US dollar and weighing on rate-sensitive assets.

Gold and silver continued their rally as investors sought exposure to hard assets. Silver performed strongly but saw a sharp one-day pullback late in the month (which has continued into February) as higher rate expectations weighed on precious metals.
